Positive Drill Results from Altintepe (Turkey)

- KT-DD-12 returned 82.30 m grading 2.43 g/t Au including 45.50 m grading 3.64 g/t Au in oxide
- KT-DD-5 returned 91.00 m grading 1.34 g/t Au in oxide
- KT-DD-6 returned 54.90 m grading 2.38 g/t Au including 21.20 m grading 3.55 g/t Au in oxide
- Exploration drilling has commenced on Camlik Zone.

The results show excellent continuity of oxide mineralisation within a zone measuring 400 m x 50 m. Previous tests on similar material from the Camlik East Zone have demonstrated recoveries of 91-98 % of the contained gold. Channel sampling at surface and drilling also suggest an additional 50 m-wide zone with grades of 0.3-1.0 g/t gold. Commenting, Bob Foster C.E.O. said, "We have now completed the oxide drilling at Kayatepe and will shortly be in a position to undertake a new in-house calculation of the resource based on these holes and the well-defined geometry of the oxide zone. This new resource should add materially to the total resource base of some 311,000 oz gold at Altintepe"...
