Second gold zone at Konya

AIM-QUOTED Stratex International plc has reported the discovery of gold mineralisation at the Karacaören prospect on its Konya project in Turkey.

The new gold discovery came after follow-up work on stream-sediment anomaly clusters, and includes 1.27g/t in porphyry-style stockwork. This is the second zone of porphyry-style gold mineralisation on the Konya property.

Stratex's partner in the project, Teck Cominco Ltd, is committed to a US\$1 million expenditure on the property by the end of June to fast-track the exploration effort. The partners have also completed 1,230m of drilling on the Doğanbey prospect where broad zones of anomalous gold have been intersected. Drilling is continuing.
